Research Paper

In Vitro Antimicrobial Evaluation of Aqueus Methanol Extract from *Calpurina Aurea* (Fabaceae) Leaves.

Birhan M, Tessema T, Kenubih A and Yayeh M.

Abstract

In Ethiopia, *Calpurnia aurea* is used for the treatment of syphilis, malaria, rabies, diabetes,
hypertension, diarrhoea, leishmaniasis, trachoma, lymphatic filariasis, fungal diseases and
different swellings. However, despite its traditional usage as an agent, there is limited
information regarding the phytochemical and in vitro antimicrobial profile of the leaves of
_Calpurnia aurea_.

_Calpurnia aurea_ leaves were collected from Gondar area, northern Ethiopia and dried under shed. The collected
plant material were powdered using electrical grinder and then macerated with 99.5% methanol
for 72 hours with mechanical shaking repeated three times and it was filtered through Whatman
No.1 filter paper and the filtrate was dried using rotary evaporator at 50°C.

C. Preliminary phytochemical screening such as test for tannins, flavonoids, terpenoids,
saponins, glycosides, alkaloids and anthraquinones were done using standard methods;
antimicrobial activity by agar well diffusion and micro well dilution methods were performed.
_Calpurnia aurea_ leave contained tannins (+), terpenoids (+), saponins (+), flavonoids (+), alkaloids (+) but lacked
glycosides and anthraquinone (-). The extracts of leaves of the plant indicated good
antimicrobial activity in both crude and fractionate especially methanol extract against
_E. coli_ (ATCC 25922), _S. auras_ (ATCC 29213) and
_S. typhi_ (ATCC 6539). It is evident from this study that the highest therapeutic efficacy possessing
majority of secondary metabolites with strong antimicrobial property were present in leaves of
_Calpurnia aurea_,
which can be quantified for application in pharmaceutical industry for treatment of different
disease.

**Keywords**: Antimicrobial Effect, Calpurnia Aurea, Phytochemicals
